Dear Parents/Caregivers,

We currently have children enrolled at Barnier that can become extremely ill and even hospitalised if they come into contact with an infectious disease. In most cases this is due to a weak immune system.

We are asking that if your child (irrespective of the class they are in) is away from school with any type of highly infectious disease (eg. chicken pox, slap cheek, etc.), could you please email your child’s class teacher to let them know as soon as possible. This way we can notify the parents of these children and they can take the appropriate action for their child.

We thank you in advance for your consideration.
